Connected Nation Texas is a statewide initiative funded through the Broadband Access Collaborative to support all Texans in leveraging broadband.

Published January 31, 2020

Broadband data displayed on this map are developed from a combination of direct provider outreach and data collection, FCC Form 477 broadband deployment data, and independent validation data. In some cases, where a direct provider was unwilling or unable to supply granular broadband data and a detailed service area could not be developed, the provider’s service availability is represented by FCC Form 477 data, a format which tends to be oversimplified. This map is not a guarantee of internet service availability. Wireless and satellite services may also be available.

The current FCC definition of broadband is a minimum speed of 25 Mbps download/3 Mbps upload.

Please submit feedback regarding any possible mapping inaccuracies through the Connected Nation website or email feedback@connectednation.com. Updates to the map will occur in July 2020.
